

JAYANTH M

Senior Cloud & DevOps Engineer

Bengaluru, India • +91 96329 32097 • jaygowda82@gmail.com • linkedin.com/in/jayanth-m-113095374

PROFESSIONAL SUMMARY

Senior Cloud & DevOps Engineer with 4+ years of experience building and managing cloud-native microservices infrastructure across AWS and multi-cloud environments. Expertise in Kubernetes (EKS) orchestration, GitOps with ArgoCD, observability, and end-to-end server-to-K8s migrations. Hands-on experience managing 12 AWS accounts, CI/CD pipelines, and RBAC-secured multi-tenant clusters for global enterprise clients including Bombardier Aviation and Barclays Bank.

CORE SKILLS

Cloud Platforms: AWS (EKS, EC2, S3, IAM, VPC, RDS, Route53, CloudWatch, API Gateway, Savings Plans)

Kubernetes & GitOps: Kubernetes (EKS), ArgoCD, Kustomize, Helm, Docker, RBAC, HPA, PodDisruptionBudgets, K8s Image Updater

Microservices & Architecture: Microservices, Service Mesh (Istio — in progress), Container Orchestration, Blue-Green Deployment, Canary Releases, Disaster Recovery, SRE Practices

CI/CD: GitHub Actions, Jenkins, Jenkins Pipeline, Groovy DSL, Drone CI, Maven, NPM, ANT

Observability & Monitoring: Prometheus, Grafana, ELK Stack, CloudWatch, Nagios, Datadog, Incident Response, RCA Reporting

Infrastructure as Code: Terraform, Ansible, CloudFormation

Scripting & Automation: Python, Shell, YAML, Groovy, Ruby

Security: DevSecOps, SAST, IAM Policy Audits, RBAC, Dependency Scanning, HashiCorp Vault, Cloudflare

OS & Servers: Linux (RedHat, Ubuntu, CentOS), Windows, Apache, Nginx

Version Control: Git, GitHub, GitLab, SVN

PROFESSIONAL EXPERIENCE

Senior Cloud & DevOps Engineer Sep 2025 – Present

Userfacet UXDesign & FutureLab LLP | Bengaluru, India (Promoted from DevOps Engineer)

- Architected and managed production-grade EKS cluster on AWS (us-west-2) with multiple node groups running across dev, production, and AI environments — supporting multiple daily deployments with zero downtime
- Led full server-to-Kubernetes migration — containerising MongoDB, PostgreSQL, Elasticsearch, Redis, Celery workers, and microservices across dev and production environments
- Redesigned entire CI/CD pipeline — migrated from manual Drone CI + Portainer workflow requiring manual restarts per deployment to a fully automated Jenkins webhook-triggered pipeline
- Automated full deployment flow: code push → Jenkins builds Docker image → pushes to GHCR → ArgoCD detects new image → auto-deploys to correct namespace on EKS — eliminating all manual intervention
- Implemented GitOps using ArgoCD with Kustomize overlays and Image Updater for fully automated image promotion across dev, production, and AI environments
- Configured Horizontal Pod Autoscalers and PodDisruptionBudgets across all namespaces ensuring high availability and zero-downtime deployments
- Managed AWS API Gateways with Lambda authorisers for Firebase Auth JWT validation and WebSocket support for real-time services
- Managed production infrastructure for a high-traffic platform serving 480k+ monthly visitors — overseeing dev and production server environments, deployments, uptime, and performance alongside the primary Kubernetes-based BuildUX infrastructure
- Managed Cloudflare configurations across 7 production domains — DNS management, cache rules, speed optimisation, and security settings
- Managed VPC networking — NAT Gateway, ALB, Classic Load Balancer, security groups, and ingress-nginx controller
- Managed S3 buckets with lifecycle policies and bucket policies for media storage, DB backups, Terraform state, and audit logs
- Configured automated daily CronJobs for MongoDB and Elasticsearch backups; managed EBS PVCs with gp3 storage across all environments

- Integrated HashiCorp Vault for secrets management with External Secrets Operator and cert-manager for automated TLS certificate management
- Managed Qdrant vector database and n8n workflow automation deployments for AI/ML workloads
- Managed AWS billing across 12 accounts under a master account — purchased Compute Savings Plans with reserved commitments and maintained cost dashboards
- Configured Kubernetes RBAC, namespace isolation, and network policies for secure multi-tenant microservices workloads
- Built full observability stack with Prometheus and Grafana — cluster-wide monitoring, alerting, and performance dashboards; documented incidents with RCA reports and on-call runbooks
- Performed disaster recovery and database restoration following a ransomware incident, restoring multiple production systems with minimal downtime

DevOps EngineerSep 2024 – Sep 2025

LanceSoft Engineering Pvt. Ltd. | Client: Bombardier Aviation, Canada | Hyderabad

- Designed, built, and maintained end-to-end CI/CD pipelines using Jenkins and Jenkins Pipeline workflows, reducing deployment errors by 40% across teams
- Developed Python automation scripts for provisioning AWS EC2, EKS, ECS, and Fargate resources, cutting environment setup time by 50%
- Orchestrated containerised workloads using Docker and Kubernetes for consistent, scalable, and repeatable enterprise deployments
- Integrated DevSecOps practices — embedded SAST and dependency vulnerability scanning directly into CI/CD pipeline stages
- Built reusable Groovy shared libraries to standardise and accelerate CI/CD pipeline development across multiple teams
- Configured Prometheus, Grafana, and CloudWatch monitoring dashboards for proactive incident detection and response
- Implemented AWS cost optimisation strategies through resource audits, right-sizing, and automated cleanup of unused resources
- Managed IAM roles, policies, and permissions across AWS services following least-privilege security principles
- Collaborated with development teams to define deployment strategies, branching models, and release management processes

DevOps EngineerAug 2023 – Aug 2024

LanceSoft Engineering Pvt. Ltd. | Client: Barclays Bank, United Kingdom | Hyderabad

- Managed cloud-native deployments and CI/CD pipelines for a leading global multinational banking client with strict compliance requirements
- Automated infrastructure provisioning using Terraform and Ansible, improving deployment consistency, repeatability, and reducing manual effort by 60%
- Built Python utilities for AWS IAM policy audits, automated compliance checks, and security remediation workflows
- Developed log monitoring and anomaly detection scripts with real-time Slack and email alerting for rapid incident response
- Managed production Linux and Windows server environments with automated patching, OS hardening, and compliance workflows
- Implemented infrastructure drift detection and automated remediation using Ansible playbooks across production environments
- Worked closely with security teams to ensure all deployments met banking-grade compliance and audit standards
- Maintained detailed runbooks, deployment documentation, and post-incident reports for all production changes

Build & Release EngineerFeb 2023 – Jul 2023

LanceSoft Engineering Pvt. Ltd. | Client: AXA Group, France | Hyderabad

- Migrated source control from SVN to Git, improving team collaboration, branching efficiency, and version control practices by 30%
- Refactored Jenkins freestyle jobs into modular, reusable Groovy pipelines enabling scalable and maintainable CI/CD automation
- Automated artifact creation, version tagging, and deployment packaging using Python utilities and Chef cookbooks
- Designed and implemented multi-stage build and release pipelines with environment-specific deployment gates
- Authored comprehensive SOPs, troubleshooting guides, and runbooks for Jenkins pipelines and CI/CD processes
- Worked with cross-functional teams to align release schedules and streamline the software delivery lifecycle

Linux AdministratorAug 2022 – Jan 2023

- Administered Linux (RedHat, Ubuntu, CentOS) and Windows servers for enterprise production workloads of a major Nordic telecom provider
- Implemented backup and disaster recovery strategies using Rsync, Tar, and Zip with automated scheduling and verification
- Created Python and Shell scripts to automate routine Linux admin tasks — user audits, service restarts, log rotation, and disk cleanup
- Configured and managed SSH, FTP, NFS, and Apache web servers; tuned system resources for optimal performance and stability
- Deployed Nagios-based monitoring alerts to proactively track system performance, uptime, and service availability
- Managed endpoint security through automated antivirus scans, vulnerability patching, and remediation workflows
- Supported on-call responsibilities for production incidents, ensuring rapid diagnosis and resolution with minimal downtime

KEY ACHIEVEMENTS

- Eliminated all manual deployments by redesigning CI/CD pipeline from Drone CI + Portainer to fully automated Jenkins + ArgoCD + EKS workflow — reducing deployment time from hours to minutes
- Migrated entire production infrastructure from bare-metal servers to Kubernetes EKS — enabling auto-scaling, zero-downtime deployments, and multi-environment consistency across dev, production, and AI
- Reduced CI/CD deployment errors by 40% and environment setup time by 50% through pipeline automation — directly improving release reliability for global enterprise clients
- Managed 7 production domains serving 480k+ monthly visitors with 99.9% uptime — overseeing Cloudflare, CDN, DNS, and Kubernetes infrastructure simultaneously
- Delivered DevOps infrastructure for 4 global enterprise clients across aviation, banking, insurance, and telecom — Bombardier (Canada), Barclays (UK), AXA (France), Telia (Norway)
- Optimised AWS cloud costs across 12 accounts by purchasing Compute Savings Plans with reserved commitments under a master account — reducing EC2 and compute spend organisation-wide
- Promoted to Senior Cloud & DevOps Engineer at Userfacet in recognition of end-to-end infrastructure ownership and delivered business impact

EDUCATION

Bachelor of Engineering — Civil Engineering

Maharaja Institute of Technology, VTU | Mysore, Karnataka • 2019 – 2022

CERTIFICATIONS & LEARNING

- AWS Certified DevOps Engineer – Professional (actively preparing)
- Certified Kubernetes Administrator (CKA) — CNCF (actively preparing)
- Participant — Kubernetes Community Days Bangalore 2023
- Advanced CI/CD and Infrastructure as Code — Udemy
- Continuous learning in Kubernetes, AWS, and cloud-native technologies via self-study and hands-on implementation
